What are the risks and what could I get in return?

The risk indicator assumes you keep the Fund for 3 years, in accordance with the recommended holding period. The actual risk can vary significantly if you cash in at an early stage and you may get back less. You may not be able to sell your product easily or you may have to sell at a price that significantly impacts on how much you get back. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact the capacity to repay the initial capital amount invested.

Other risks that are materially relevant to the Fund and which are not adequately captured in the summary risk indicator:

- **Credit Risk:** the risk that the issuer of a debt instrument may default, in whole or in part, on its obligation to repay the full capital amount invested and/or the interest thereon.

This product does not include any protection from future market performance so you could lose some or all of your investment.

Table 1 - Costs over time:

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and, if applicable, how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0% annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario;
- 10,000 Euro is invested.

Single investment: 10,000 Euro		
	If you exit after 1 year	If you exit after 3 years
Total costs	358 Euro	714 Euro
Annual cost impact (*)	3.58%	2.29%

(*) This illustrates how costs reduce your return each year over the holding period. For example, it shows that if you exit at the recommended holding period your average return per year is projected to be 3.15% before costs and 0.86% after costs. We may share part of the costs with the person selling you the product to cover the services they provide to you. These figures include the maximum distribution fee that the person selling you the product may charge (2.00% of amount invested. Single investment 200 Euro).
